

Standard Sats

An Open Grant Pitch

VALET

**...built to work where others
don't.**

www.valet.finance

The Problem

- Slow Acceptance Of Bitcoin as a Medium of Exchange due to price volatility
- Global dependence on centralized paper-backed stablecoin due to a lack of viable options.
- Complex and somewhat costly Lightning onboarding, slowing Bitcoin adoption as a final payment settlement channel.

Our Mission

- To accelerate Bitcoin's use as everyday money by providing merchants and users with simple, stable, and self-sovereign payment tools built on the Lightning Network.
- To make Bitcoin usable for everyone, no matter the device, geographical location or technical knowledge.skills.
- To make Bitcoin more inclusive and enable financial participation in areas where other tools fails.

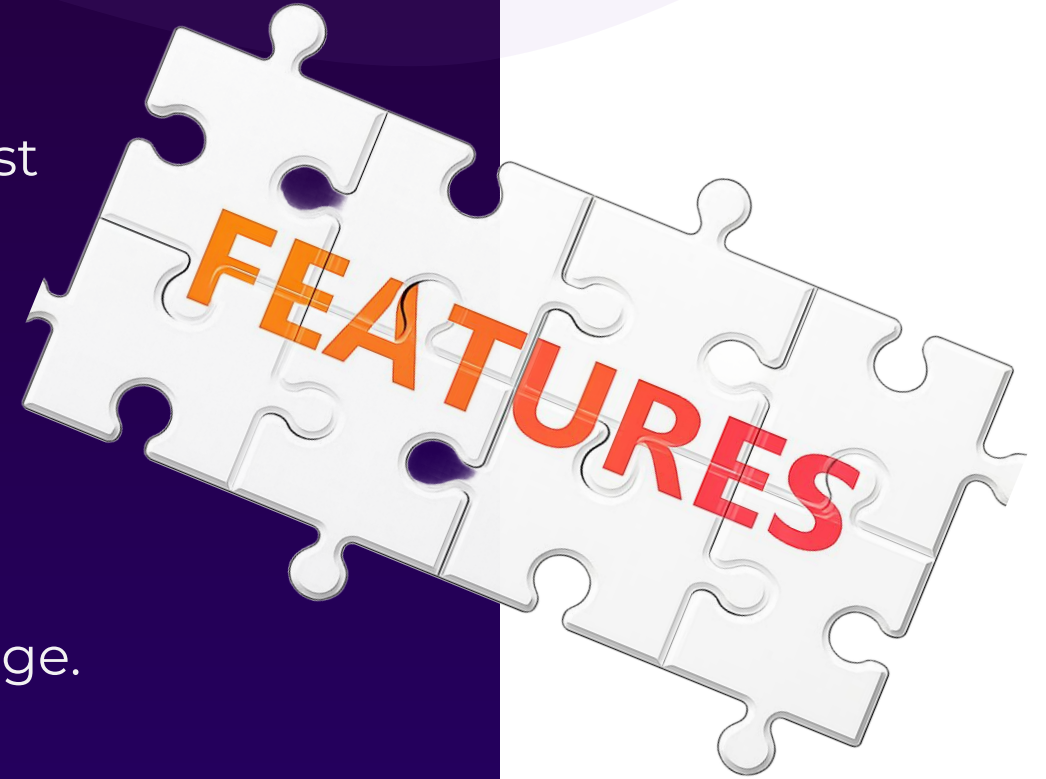

The Solution - Valet

- Fiat-stable Bitcoin payment: Hosted Fiat Channels let merchants accept Bitcoin while locking in fiat value, removing the risk of volatility.
- Decentralized stability: Instead of relying on paper-backed stablecoins, Valet provides a Bitcoin-backed alternative that combines the trustless nature of BTC with fiat-like stability.
- Frictionless Lightning onboarding: With Hosted Channels, users do not need to lock liquidity or handle complex setups; they can receive Bitcoin payments instantly

Key Features

- Non-custodial, seed-backed wallet.
- Lightning Network support for fast and low cost transactions.
- Coin Control.
- Fee Control.
- Transaction Batching.
- Watch-Only mode with Hardware wallets.
- Private electrum connection and Tor proxy usage.
- Local Channel Backups.
- Hosted/Fiat Channels Implementation

Past Innovation: Hosted Channels

We have previously implemented hosted/fiat channels which created Bitcoin backed stable Sats.

- Users could lock-in Sats to a stable value, avoiding the Bitcoin volatility.
- Ideal for merchants and price stability use cases.
- Currently paused this feature due to infrastructure and running cost of maintenance.

Target Impact & Goals

- Bank the Unbanked.
- Provide cheap, botherless censorship-resistance payment
- Enable micro-payments and remittances with a stable UX.
- Provide self-managed savings accounts

Our Numbers

- **Hosted/Fiat Channel (While Active):**

700+ Fiat Channels Opened

TVL ATH - \$1100 - \$1200

APY - 0.5 - 0.9%

- **Wallet Downloads:**

All Time Downloads - 100+

100+ Active Users

- **Active Community:**

Telegram - 140

X (Twitter) - 208

GitHub Stars - 26

What We Need

We are seeking for funding and support to do the following things:

- Continue wallet software maintenance (new BIPs, better Taproot support, HWI)
- Revive the maintenance of the Immortan scala LN library for mobile devices so it will support Bolt12, improvements on Hosted channels side
- Widen marketing coverage, and carry proper registration of the entity to re-enable wallet on Google Play
- Expand the protocol to credit channels - fiat denominated hosted channels backed by real bitcoin channels opened with the same LSP
- Enabling orderbook exchange core on LSP side
